

AUTOMATIC TICKET VENDING MACHINE FOR PUBLIC TRANSPORT TYPE DS 50

User-friendly: reliability and rapidity in service for user and operator.

Stationary urban distributor which accepts coins, cash card and private electronic cash card

The ticket vending machine type DS 50 is both the result of a collaboration between transport operators and SADAMEL, and the response to the current and future needs of the market.

It is economic, user-friendly, fast, innovative and reliable.

The DS50 is targeted at transport operators equipped with an urban or interurban tariff system or a combination of the two.

It can be installed at stations, bus, tram or trolleys stops. That is to say, anywhere it may be necessary to acquire tickets or obtain information on the network of the transport operator.

The passenger can select his ticket by means of tariff keys corresponding to his zone or destination, using the postal number or another code.

The passenger can pay for his ticket either with coins (with or without the giving of change), bankcard or electronic cash card (chip card, rechargeable or non-rechargeable).

The ticket is issued on a thermal paper or chip card carrier.

TECHNICAL CHARACTERISTICS

Standard equipment
